

GEOGRAPHIC UNITS USED FOR SOCIOECONOMIC IMPACT ANALYSIS IN THE GULF OF MEXICO REGION

Allan Pulsipher and Kathy Perry
Center for Energy Studies
Louisiana State University

March 22, 2011

Research Questions

- 1) Do the geographic units being used by BOEMRE for planning purposes obscure or distort the potential socioeconomic impacts from offshore oil and gas activity in some of the regions or counties included in the geographic unit?
- 2) Are there alternative units or approaches that will reduce or avoid such problems?

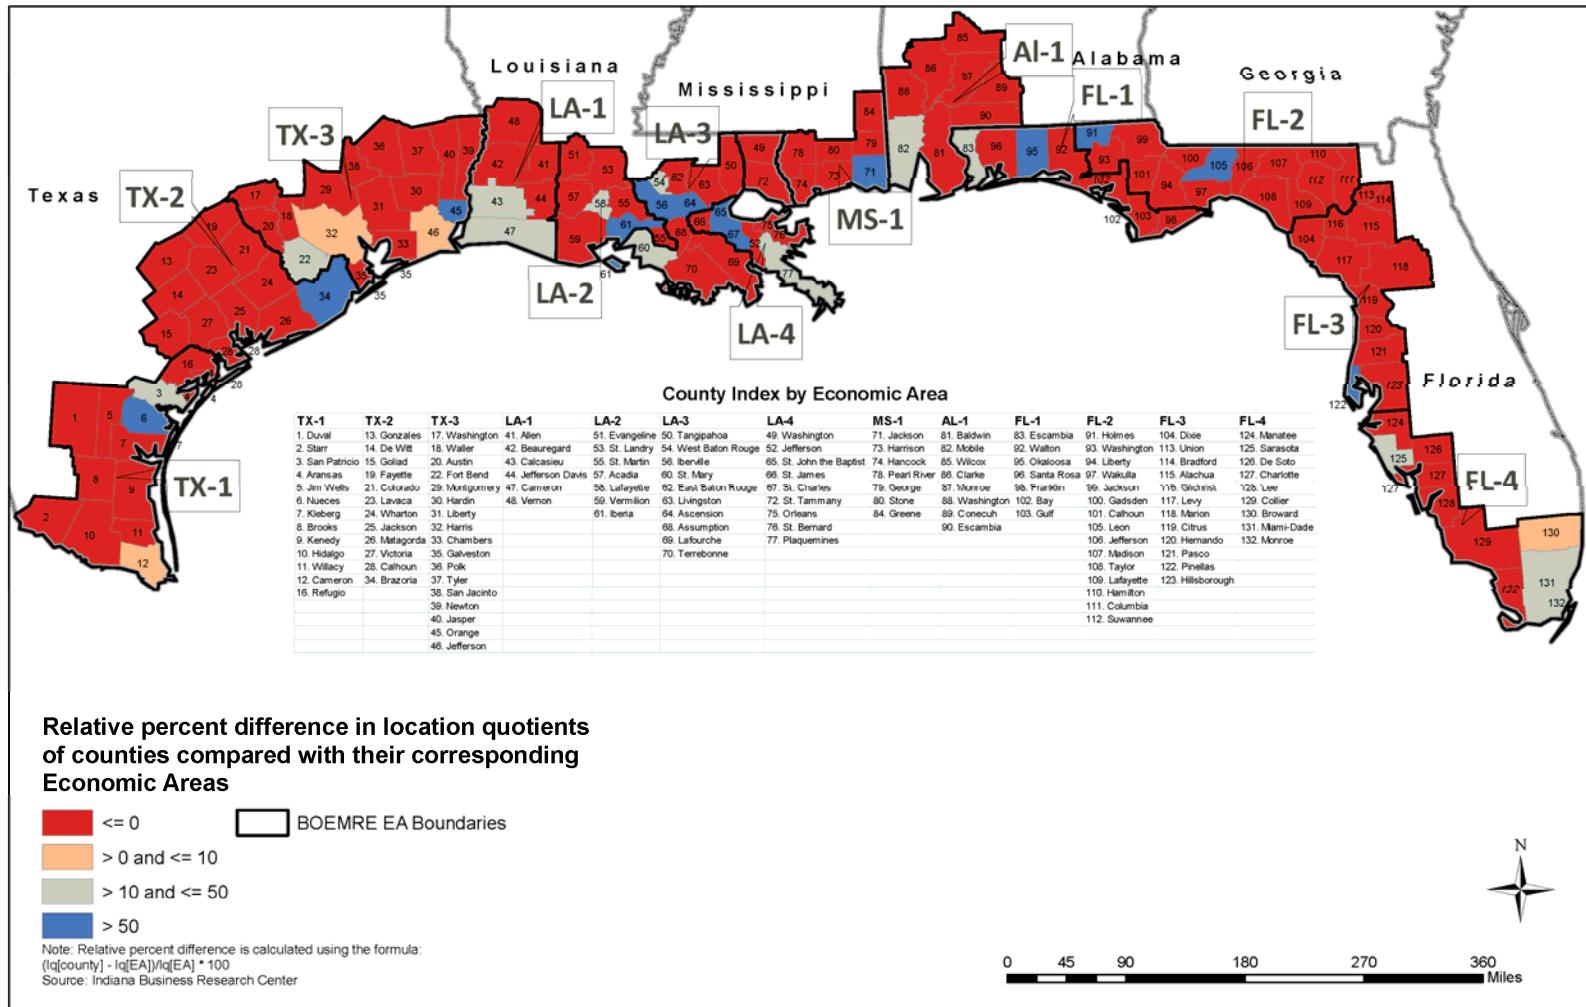

Geographic Units:

- The 132-county area identified as the potential affected area for federal offshore activities on the Gulf of Mexico is organized into
 - 13 Economic Areas (EA) and subdivided further into
 - 23 Labor Market Areas (LMA).

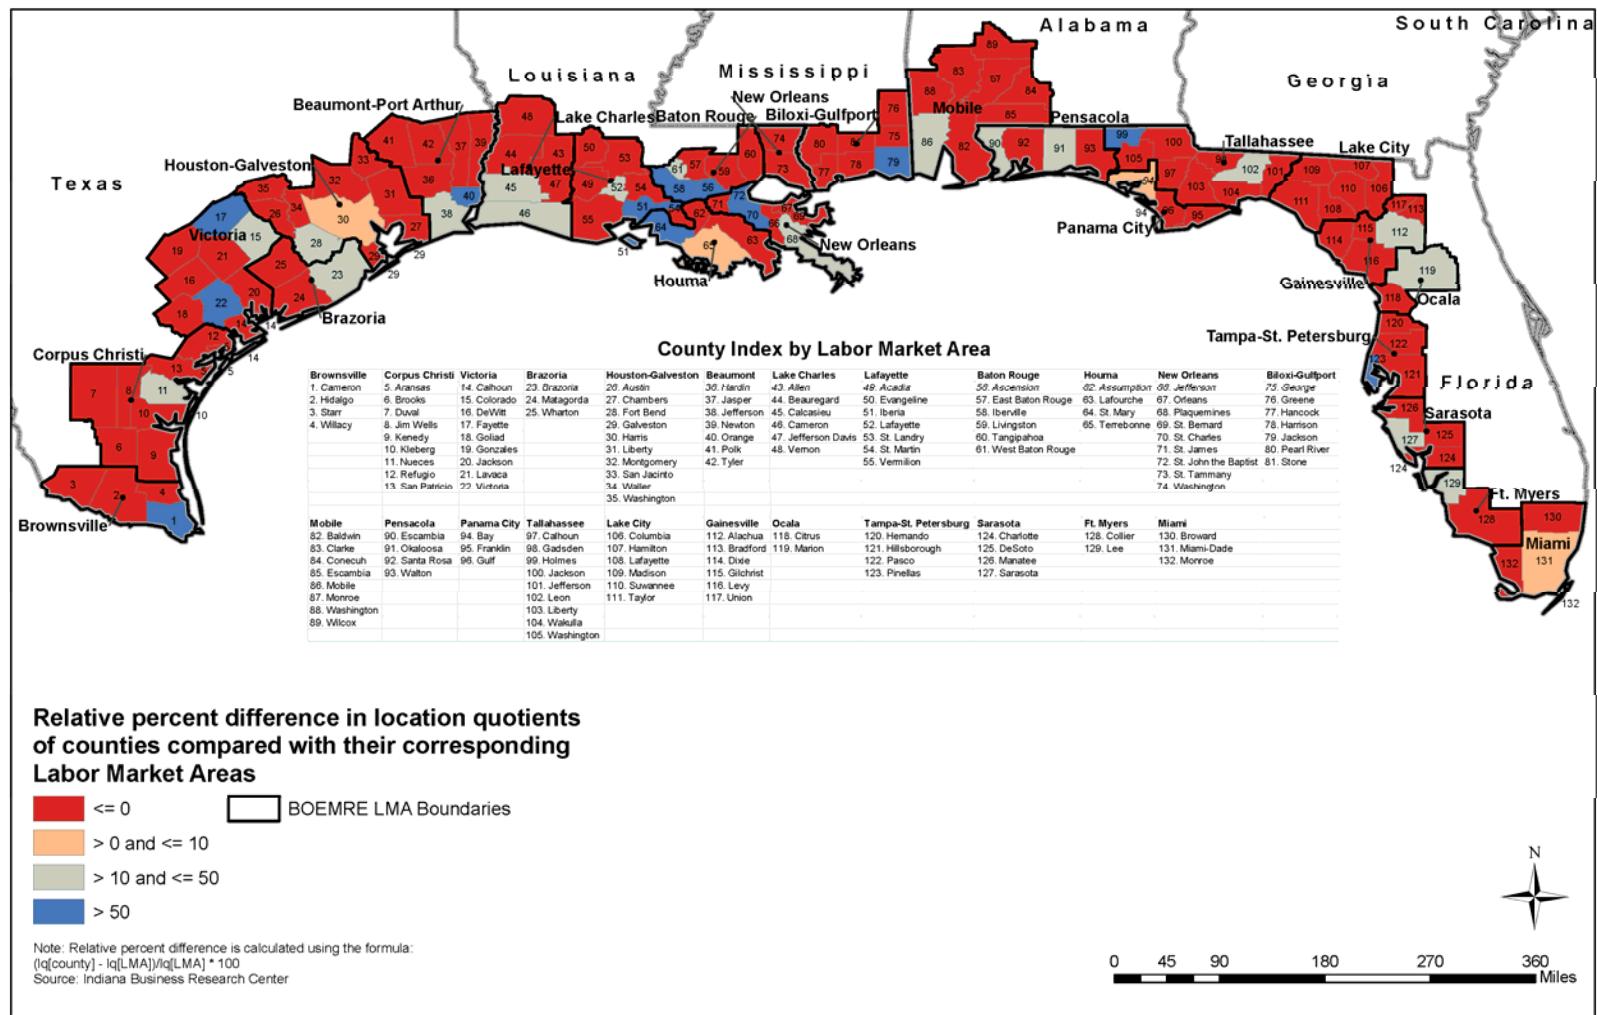

From the tip of Florida to the Texas/Mexico border through five states

Data

- Industrial Clusters (17) from IBRC supported by EDA
- NAICS Employment data via WholeData 2001 to 2008 for oil and gas and associated categories, as well as Travel/Recreation

Relative percent difference in location quotients of counties and Economic Areas (2008 energy sector employment)

Relative percent difference in location quotients of counties and Labor Market Areas (2008 energy sector employment)

Some Findings:

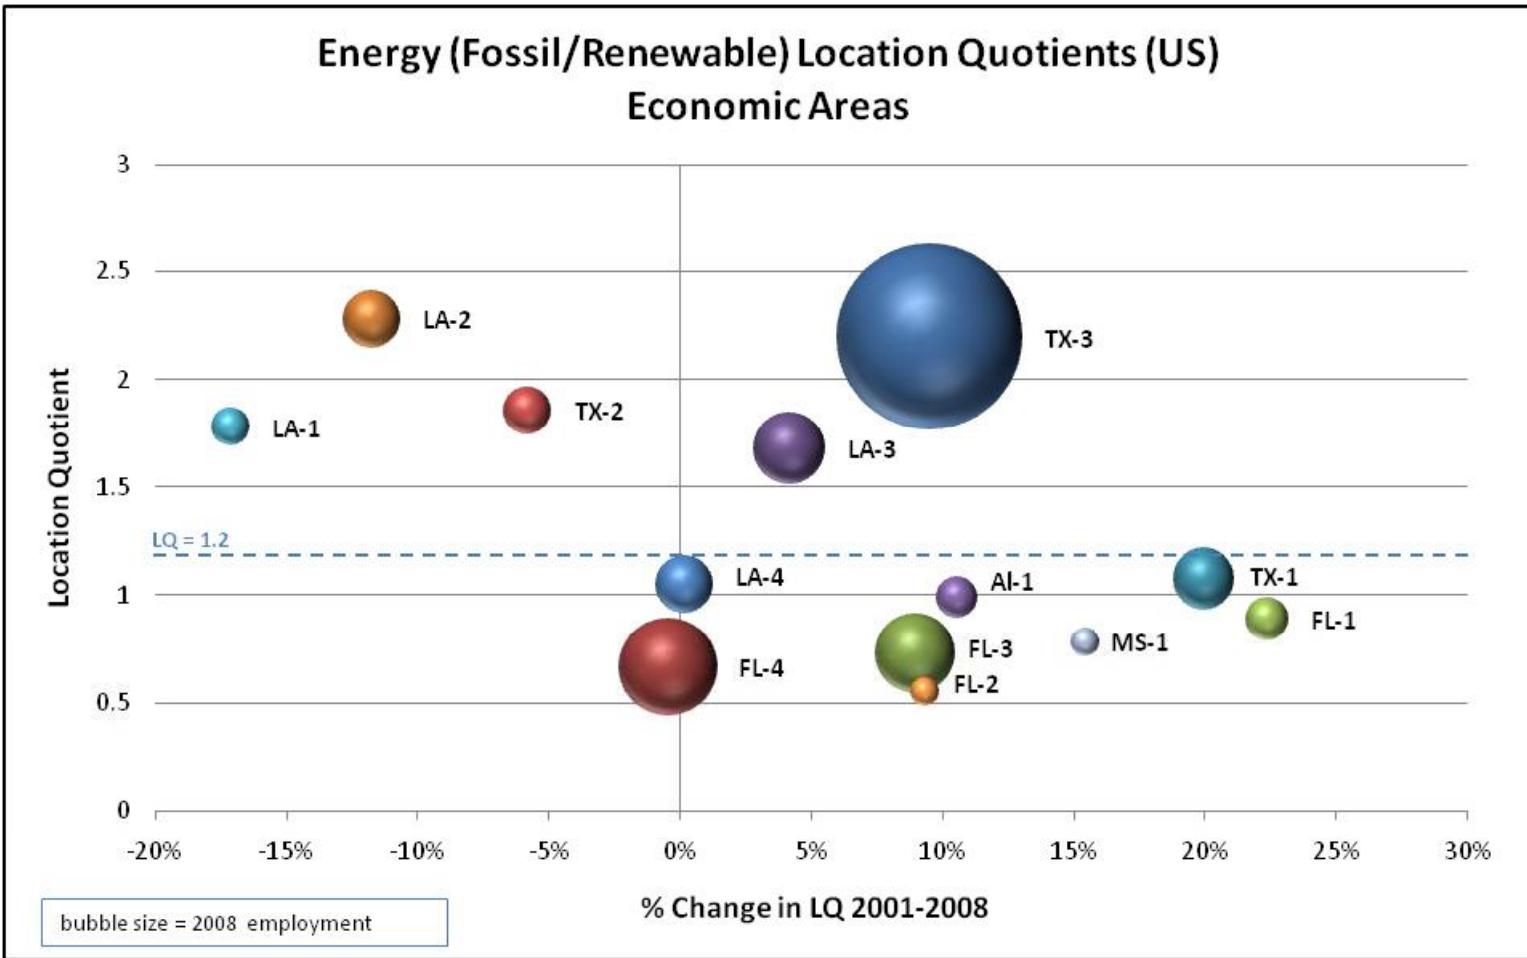

- Numerous instances of **values calculated for 13 Economic Areas (EAs) obscuring or distorting dimensions of the cluster or industry observable at the level of the 23 Labor Market Areas or 132 counties.**

Categories of Distortion:

- **“Cancelling Out”** Some EAs/LMAs are composed of counties that are very different with very different proportions of oil and gas activity that EA-level measures tend to “cancel out.” EGs. TX-1: Corpus Christi/Brownsville, LA-3 Baton Rouge/Houma
- **“Numerical Dominance”** Some EAs/LMAs include counties that are so large relative to the others that even extreme concentrations or changes in smaller counties do not influence the unit totals. TX-3: Houston/Galveston, LA-1 Lake Charles (travel & recreation).

Categories of Distortion - cont.

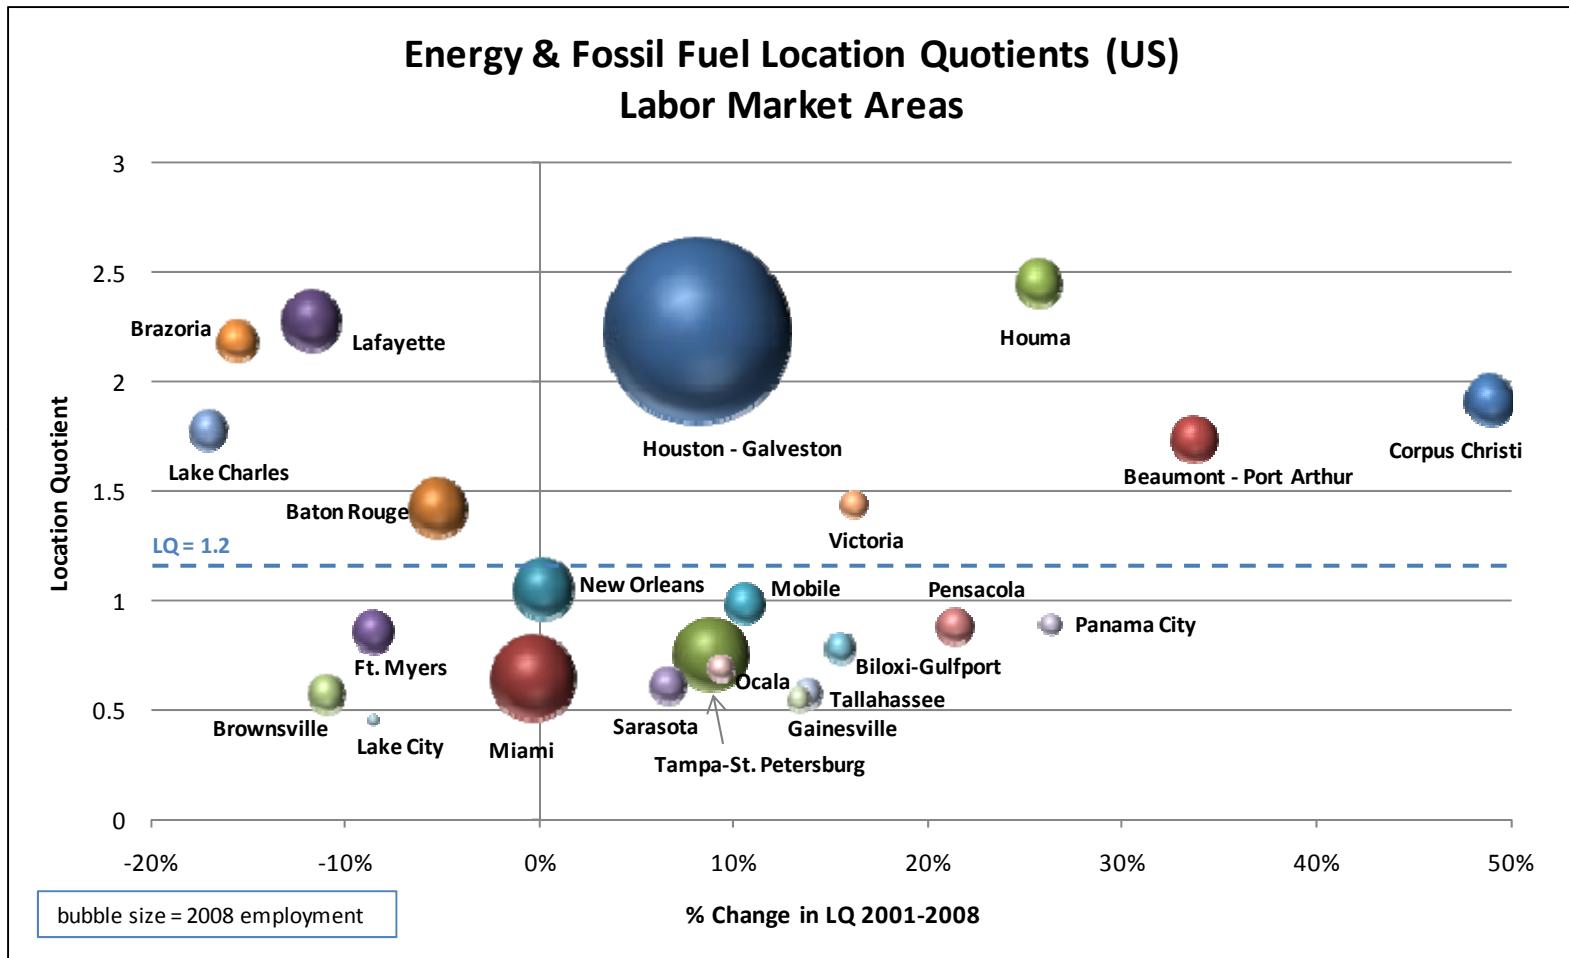

- **“Meaningless Averages”** Some counties in units are so different in relative importance and concentration that the average for the EA or LMA does not represent any of the members. LA-4 New Orleans
